Our Family & Friends

From Hartley's Desk

I get to enjoy this business more as every year goes by. For the last 35 years, since my wife and I started managing the business and now

with our sons as partners taking on more and more responsibilities, our business continues to grow with help of our dedicated staff. What I enjoy the most is the relationship with our customers. We have some customers that have dealt with us for three generations, their parents dealing with my father, the next generation with me and now their children with my sons. These customers have also become our friends and business associates. We are concerned with their business and them with ours. We both are happy with each others success. We want to enhance their operations to optimize their efficiencies and production. Their continued support allows us to invest in more resources to enhance their operations. This is the optimum business relationship and provides a self sustaining profit spiral for both our dealership and to you, our customer. So wether you have dealt with us for generations or are just beginning to, our dealership is totally committed to making your operation more successful, with dealings you do at our exceptional family owned and operated dealership.

21st Century Turn On Classic 8N Compact Tractor

New Holland has announced the introduction of the new Boomer 8N, a compact tractor that combines vintage design with modern, innovative amenities. The latest addition to New Holland's Boomer line, the redesigned 8N features distinctive, timeless styling, a Continuously Variable Transmission (CVT) that creates a fun, easy, car-like driving experience as well as a variety of customizable accessories. First sold in 1948, this updated version of the classic 8N is now available to consumers seeking reliable power wrapped in a compact and time-honored package.

Whatever the job requires – whether loading mulch, mowing the lawn, clearing a pasture or digging a trench – the new Boomer 8N tractor makes it fun, easy and comfortable for serious rural lifestylers or hobby farmers to complete any task.

Safety Tip Silo Gases

Nitrogen dioxide (NO₂) is the deadly silo gas that forms as a result of chemical reactions which start when chopped plant material is placed in a silo. Warning signs that silo gas is present include: A bleach-like odour; a yellowish-brown haze at the silage surface or near the feed room floor; and/or dead flies, cats or rodents on the feed room floor, or dead birds in the silo. If you see any of these signs, immediately clear the area of people and livestock, and start the forage blower to force toxic fumes out of the silo.

How to deal with silo gas..:

1. Post a 'Silo Gas' warning sign in a location near the silo. Declare silo areas 'off limits' to children and visitors during the three-week period after filling.
2. Contact your local emergency service to determine if pressure demand remote breathing equipment is available to deal with an emergency.
3. Provide feed room ventilation to remove silo gas that may 'spill' down the chute or be blown out by the unloader. If such ventilation is not available, keep the feed room door tightly sealed to prevent contamination of the stable.
4. Adjust the distributor to level silage during filling operations. Don't enter the silo to level material by hand. If it is necessary to go into a silo at the completion of filling, do so as soon as the last load is off. Don't wait until the next day! Leave the blower running while you are inside the silo.

Silo entry should never be attempted without wearing a life-line that is in the hands of outside help. Always ventilate the silo headspace thoroughly prior to entry.

Anyone who experiences the slightest throat irritation while in the vicinity of a recently-filled silo should vacate the area and get into the fresh air as quickly as possible. If someone collapses while working inside a silo, start ventilating with the forage blower immediately. A fresh air supply is crucial to both victim and rescuers.

Farm Progress 2009

For the second year in a row, Markusson New Holland teamed up with other Saskatchewan New Holland dealers to represent New Holland agriculture equipment in the 2009 Farm Progress Show. This year's display featured the new 8N boomer tractor, as well as the new P2070 Precision Drill which New Holland launched at our booth. The P2070 delivers optimum seed placement. A rear-folding carrier frame provides the ideal combination of strength, flexibility and maneuverability, while its Flexi-coil heritage ensures rugged durability. The 2009 Farm Progress Show was a record setting total Attendance of 42,863, which puts the number of attendees near the top of the show's history. The introduction of a preview day contributed to the success of the show, and the International Business Centre, which Markusson New Holland was also a member of!

Country Kitchen Recipe

Taco Salad

- 1 lb. seasoned taco meat (beef or chicken)
- Iceberg lettuce, 1 head torn apart
- 1 can red Kidney beans, drained & rinsed
- 1 can sliced black olives, drained
- 3-4 green onions & tops, diced
- 1 chopped tomato
- 1 cup shredded cheddar cheese
- Catalina or French salad dressing
- Fritos

Toss all ingredients together in large bowl; serve immediately. Enjoy!

Service Suggestion

A laser temperature gun is an inexpensive way to test bearings on implements such as combines and balers. It is a fast and easy way to catch a bearing before it fails, which can prevent downtime and more importantly, a fire. Regardless, it is always a good idea to carry a fully charged fire extinguisher in field.

Employee Profile

Fred Federle
Service Technician

Years With Markusson NH
2 years

Birth Place
Regina, Saskatchewan.

Family
Married to Debbie for 5 years.
Fred has a 21 year old daughter
named Nikki.

Favourite Aspects of the Business
Great people to work with,
friendly customers, and
meeting different people.

Personal Enjoyments
Nascar, Fishing and Camping

Personal Goal
To own a Cabin.

8N Compact Tractor

continued from front page...

Key features include:

- Distinctive styling including a red chassis, gray hood and fenders - the same timeless look of the original 8N
- Continuously Variable Transmission that operates like an automatic transmission with speed progressions that are seamless and smooth. There is no reason to switch gears or use a clutch – one pedal makes it go.
- Customization allows you to make the Boomer 8N your own through chrome accessories, canopies, decals and more
- 50 horsepower engine with a 2,800 pound, 3-point lift capacity
- Four-cylinder, naturally aspirated diesel engine with large cubic-inch displacement for added durability
- Four-wheel drive axle, which increases traction and enhances maneuverability
- Large operating platform, allowing plenty of leg room to stretch out, with tilt, telescoping steering wheel, power steering, adjustable seats and storage tray with cup holder
- Deluxe 3-point hitch including telescoping stabilizers and flexible link ends for easy attachment of implements
- Two-position extendable drawbar with swinging capability

Sales Tip

Now is the time to start planning your 2010 equipment purchases, and with New Holland's "Early Buyer Program" there is no better time to take advantage of the best programs and guarantee delivery for next year.

We're excited to introduce our customers to the New Holland Boomer 8N, a modern compact tractor that acknowledges its heritage. Since 1917, New Holland has provided its customers with tractors that are dependable, versatile and easy to operate. With superior quality and distinctive style, the redesigned 8N is the perfect addition to the New Holland Boomer line. The new Boomer 8N, became available to consumers nationwide in April 2009, it is the 11th model in the Boomer compact tractor line. Like the new 8N, all Boomer tractors are known for their top-of-the-line appearance, ease of use, innovation, power, maneuverability and value. Boomer compact tractors are easy to service and maintain and come in a variety of sizes certain to fit any landowner's needs. Whether maintaining a few acres or farming to make a living, Boomer compact tractors can handle a long list of chores fast and efficiently.

New Holland CR9090 Combine Sets World Harvesting Record

New Holland set a new world record with its latest flagship rotary combine, the CR9090 Elevation, confirming the combine's high harvesting capacity. The 591hp/435kW CR9090 Elevation harvested 451.2 tonnes of wheat in an eight hour period with impressive peak rates up to 78 tonnes per hour, creating a new World Record recognized by Guinness World Records. "We are delighted. You don't set a new world record every day. This is an impressive machine, which uses proven design and innovative technology to offer incredible harvesting capacity," said Hedley Cooper, New Holland's Director of Product Marketing. "Think Biggest was the guiding principle behind the CR9090 Elevation's development and we were confident we could achieve a very high record." The previous record, set in the UK in 1990, stood at 358.09 tonnes of wheat in eight hours. The CR Elevation harvested 451.2 tonnes in the same time before going on to harvest a total of 569.44 tonnes in 10 hours. "The previous record was achieved using a stripper header, but in addition to the grain, the CR Elevation harvested 445 tonnes of straw giving a total throughput of 1014 tonnes during the 10 hours, highlighting the power and capacity of this machine," added Mr Cooper. The challenge was undertaken using just one driver, New Holland demonstrator, Rene Heidig, with the machine operating continuously and without refuelling, with the fuel consumption averaging 15.14 l/ha. Taking place at the farm of Ugo Portmann, a New Holland customer based near Leipzig in central Germany, the record was set under the watchful eyes of local German notary, Peter Lorenz and Kristian Teufel from

Guinness World Records.

The average grain moisture content was of 10.9% and the average broken grain 0.14%. The outstanding grain purity achieved was as high as 99.5%. Grain loss levels and grain quality, were checked every 30 minutes under the direction of independent consultants, Uwe Schmidt Consulting from Gotha, Germany.

The CR9090 Elevation combine, uses New Holland's innovative Intellicruise™, Intellisteer™, Grain Cam™ systems and adjustable rotor vane covers to keep the combine operating at the highest levels of efficiency and productivity. The brand new 35 ft (10.7m) Varifeed™ grain header was used to keep the CR9090 Elevation fed during the record attempt. The header's rugged frame construction features a high speed heavy-duty knife drive, large auger diameter and extended reel tine reach to ensure it matches the CR9090 Elevation's high capacity. Even the grain tank has been enlarged to meet the combine's high capacity, offering a market-leading 12,500 litres. The CR9090 Elevation uses turbo compound technology to achieve greater engine efficiency, with a 5% fuel saving when compared to a similar horsepower standard engine. When combined with the CR9090 Elevation's 1160 litre fuel tank this ensured that the combine could work hard continuously throughout the 10-hour record challenge.

The CR9090 is currently only available in Europe, but we are excited that New Holland will be testing two of the big machines here in Western Canada for our market. So the CR9090 may become available to us in the future! Right now the CR9080 is the largest New Holland combine in North America.
